

District Council of Elliston

Public Register

Register of Public Roads

Date Adopted: 18 June 2007
Most Recent review: 19 January 2009

CLASSIFICATIONS

ROADS

SEALED COUNCIL ROADS

Council's sealed road network is described as follows;

- **Rural Sealed Roads** – generally Councils rural roads with higher traffic volumes. Sometimes roads that have been handed back to Council by DTEI.
- **Township Streets**- those streets which have been sealed for convenience of ratepayers, to reduce dust and improve stormwater drainage. Many will have kerb and watertable but it is not always an essential element.

UNSEALED COUNCIL ROADS

Council's unsealed road network is classified as follows;

- **Primary Collector Category 1- Appendix 1** these include only the major roads within the Council area that operate as local arterial roads. They are the main connectors between highways and major towns or they have high strategic importance such as leading to popular tourist destinations. They are roads that do not closely parallel other sealed connector roads and generally have high traffic volumes. If funds were available, these roads would be the rural roads that would receive consideration for future sealing.
- **Secondary Collector Category 2- Appendix 2** these are the roads within the Council area that are major roads for local traffic. They are not major links between highways or larger towns but still carry high priority local traffic or road trains and it is preferable that they are all weather roads.
- **General Connectors Category 3- Appendix 3** This category includes the remainder of Council's road network that has been formed and sheeted. The primary purpose of these roads is to provide all year access to adjacent residences or farms and they connect between primary connectors and secondary connectors or they directly serve roadside farms or small settlements but are not just property access.
- **Property Access Category 4 – Appendix 4** these roads serve only as access to private property and have limited formation. They provide direct access to farms, private organisations or other private business premises for the movement of plant and machinery and they need not be all weather roads.

Sealed Roads as at 3 March 2008

**Due to limited budgets, the recommended time for re-sheeting/ variation does not equate to the actual re-sheeting/ variation of a segment of road. Council will consider this policy when developing its road budget each year and in prioritising which roads will get re-sheeted each year.*
